Student Portal
localhost/web.php?page=about
Welcome
Hello, santosh kumar!
About This Website
Welcome to our Student Portal, a platform designed to help students manage their academic journey. This website provides a simple and secure way to register, login, and access personalized information. Our goal is to create a supportive environment where students can focus on their studies and connect with peers.
The Student Portal is built using modern web technologies, including HTML, CSS, JavaScript, and PHP. The backend uses a MySQL database to securely store user information. When you register, your details are encrypted and saved in the database. When you login, the system verifies your credentials and grants access to your account.
Database Connectivity
This website connects to a MySQL database using PHP. The connection is established with the following code:
<?php
$con = mysqli_connect('localhost', 'root', '', 'logindbs');
if (!$con) {
die("Connection failed: " . mysqli_connect_error());
}
?>
This connection is used for all database operations, such as signup, login, and profile management. Your password is securely hashed before being stored, ensuring your data remains safe.
